

EWCM EO Range

Controllers for compressor rooms

REFRIGERATION SYSTEMS

- Compatibility of sub-critical CO₂ systems with V910 plug&play driver
- New supported refrigerants : glycole, R290 and R427
- New optimised algorithm for balancing compressor inverter
- Suction and discharge setpoint management reflecting both ambient conditions and the refrigerated cabinet's load
- Backup function in the event of inverter failure
- Rapid configuration tool for PC **DeviceManager**

DESCRIPTION

The new EWCM EO controllers provide a means of managing compressors in refrigeration plants, thereby ensuring minimum energy consumption.

All the models in series 8000/9000 can be completely configured by the user including the management of digital compressors and inverters, digital fans and inverters, up to 2 circuits.

The complete and versatile solution adapts to various plant configurations, including sub-critical CO₂ cascade systems and glycol units.

The backup function guarantees continuous function, with no additional external devices, in combined systems with inverter-piloted loads and relays, should an inverter failure occur.

Applications

Commercial refrigeration:

- Retail outlets (Hypermarkets, Supermarkets, Convenience Stores, Grocery Stores).
- Catering (Hotels, Restaurants)

Industrial refrigeration:

- Food processing
- Food distribution
- Other industrial applications (chemical, pharmaceutical, ice rinks)

Energy saving

- More fluid regulation of the systems with inverter, with reduction of fluctuations, ON/OFF cycles of step compressors
- Simplified setting of the inverter based on the plate data provided by the manufacturer.
- Floating condensation with external temperature probe
- Modulated suction setpoint with point of sale temperature probe
- Digital input that can be configured to activate the reduced setpoint and modulated suction and discharge
- "Combined" digital and inverter systems for compressors and fans.
- Backup relay that keeps the compressor/inverter-piloted fan running even in the event of an inverter failure
- Management of electronic expansion module plug&play driver:
 - V800 for subcooling
 - V910 for CO₂ heat exchangers

Reduction of installation and maintenance costs

- New configurable regulator, including dedicated alarms for some typical functions such as:
 - Oil heating or cooling, with possibility of injecting cold gas on the heads, in environments with particularly harsh working temperatures
 - Electric panel cooling with panel temperature probe;
 - Supercooling of discharge gas by a pulse or step-by-step electronic expansion valve
 - Modulated pump management and flow switch diagnostics for units on plants with indirect expansion and with secondary fluids (e.g. glycol);
- Local/remote switching off of the machine, showing its status on the display
- Device Manager for configuration by serial line or Copy Card USB with selection of languages for software and extended management of model languages (e.g. Cyrillic script)
- Compatible with Drivers Televis**Compact** and Televis**GO**
- Wide range of function configuration programs and respective documentation available on the site www.eliwell.com

Extensive range of coolants

- R22 • R717 (NH₃) • R134A • R410A • R502 • R417A
- R404A • R744 (CO₂) • R407C • R402A • R507 • R402B
- R290 • R427 • R600a

Example of EWCM EO 2 circuits with EWCFW08 inverter discharge control

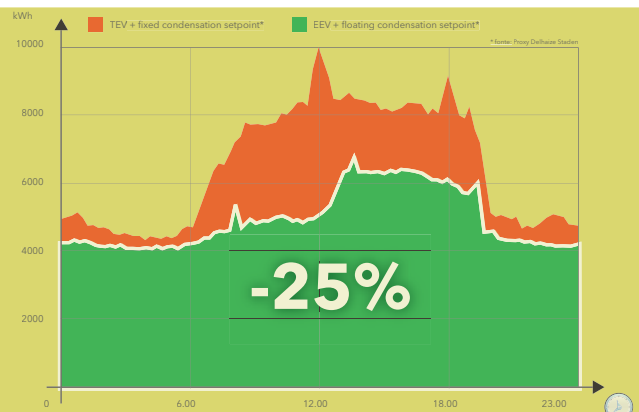

Energy saving by floating condensation

The graph represents the total consumption of a supermarket*, before and after use of floating condensation for 24 hours' energy consumption.

The green area represents reduced consumption - 25% energy saving.

The maximum energy saving can be obtained during opening hours.

MODELS

INVERTER

COMP/FAN

CIRCUITS

EWCM EO 18 DIN-Rail (9900)
Step compressors and/or inverter compressor and condensing unit up to 8 step fans or inverter fan.

EWCM EO 13 DIN-Rail (9100)
Step compressors and/or inverter compressor and condensing unit with step fans or inverter fan.

EWCM EO 13 DIN-Rail (8900)
Step compressors and/or inverter compressor and condensing unit with step fans or inverter fan.

EWCM 4120-4150-4180
Ideal for small refrigerating units with single circuit with inverter compressor or a maximum of 4 step compressors and condensation control with inverter fan or up to 4 digital inverters.

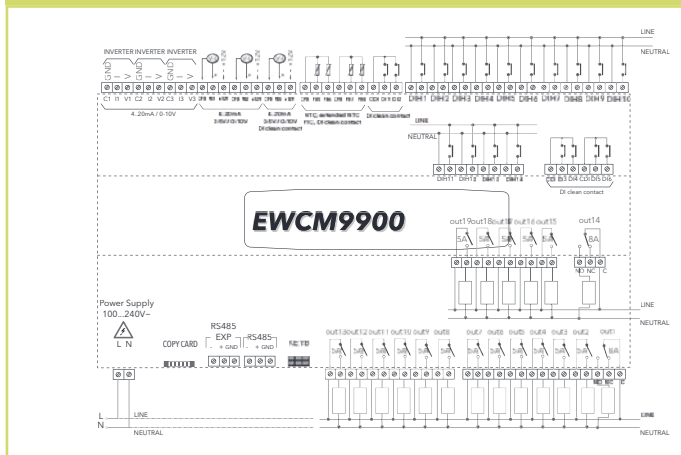

EWCM EO DIN Rail

EWCM EO 13 and 18 DIN Rail controllers have been designed for the most complex and evolved plant solutions, offering solutions for LT and NT direct expansion units and for unified units with dual temperature and single condensation. However it is also suitable for managing plants with indirect expansion and with secondary fluids.

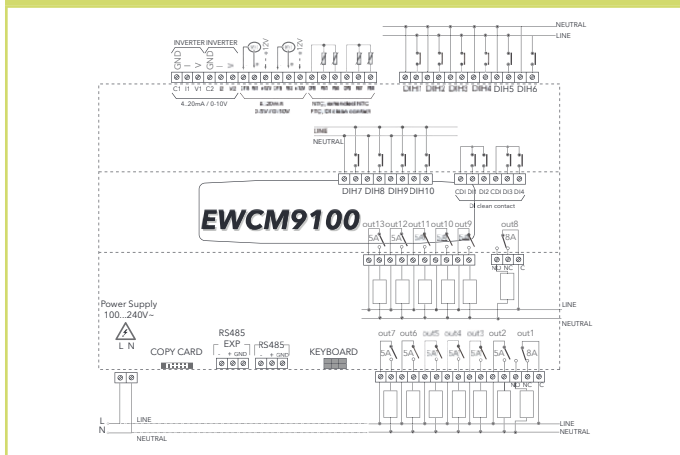

EWCM 4120, 4150 and 4180

Low-cost compact parametric controllers. Simple to use and install (mounted on a panel 32x74) for the complete control of small refrigerating units. All the inputs and outputs are independent and configurable, ensuring adaptability to most applications with step or modulating control of the compressors and the fans. The already generous supply of I/O can be further extended by connecting an external relay to the low voltage digital output or expansion modules for controlling the fans to the PWM analogue and voltage outputs.
